

PodMed Template Creation Quick Notes

Due to popular demand this is a short list of the design and creation tricks for creating your templates.

Answer Field Creation

- Making a choice field (multi-select): [Value 1,Value 2,Value 3]
 - Separate values with commas
 - Leave no extra spaces after commas
 - Other will always be a default value in the encounter
- Making an option field (single-select): [OPTION=Value 1,Value 2,Value 3]
 - Option must be in all caps
 - Leave no extra space after the commas
 - Other will always be a default value in the encounter
- Defaulting an OPTION or Choice field: [Value 1,Value 2*,Value 3]
 - To default one or more than one value, put a star after the value, before the comma
 - With an OPTION field you can only default one value
- Creating a Question in a Question: [Value 1,Value 2 ??,Value 3]
 - The ?? denotes an addition piece of info needed for a value and you will be prompted to type it in.
 - Example: [Lesion 1 ?? mm long x ?? mm wide x ?? mm deep, Lesion 2 ?? mm long x ?? mm wide x ?? mm deep, Lesion 3 ?? mm long x ?? mm wide x ?? mm deep]

Data Field Quick Insert

- To quickly enter a patient data field into the template type "patient." (minus the quotes)
 - Make sure you type a period immediately after patient
 - A list of patient data fields will appear as a menu
 - Choose the one you would like and the data field will be created in correct format
 - Example: [patient.name]
- To quickly enter a provider data field into the template type "provider." (minus the quotes)
 - Make sure you type a period immediately after provider
 - A list of provider data fields will appear as a menu
 - Choose the one you would like and the data field will be created in correct format
 - Example: [provider.name]
- To quickly enter a user data field into the template type "user." (minus the quotes)
 - Make sure you type a period immediately after user
 - A list of user data fields will appear as a menu
 - Choose the one you would like and the data field will be created in correct format
 - Example: [user.name]
- To quickly enter a referring provider data field into the template type "referral." (minus the quotes)
 - Make sure you type a period immediately after referral
 - A list of referring provider data fields will appear as a menu
 - Choose the one you would like and the data field will be created in correct format
 - Example: [referral.name]

- To quickly enter a referring provider data field into the template type "location." (minus the quotes)
 - Make sure you type a period immediately after location
 - A list of location data fields will appear as a menu
 - Choose the one you would like and the data field will be created in correct format
 - Example: [location.name]

- To make the Hotspots picture load into a template: [hotspots]

- To make the Nail Exam load into a template: [nails]
